Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicants proposed amending independent claims 10, 11, and 29 to more specifically recite that the straight surfaces of each of the two uppermost tangs on either side of the center line bisecting each of the buckets define the two points of the line that forms the angle of 25.78 degrees with the center line. The examiner indicated that while appreciated, the amendment raised new issues that would require further searching. The examiner suggested claiming more of the geometry of the specific angles and/or the radii of curvature.
